

Retail Inventory Analytics

KPI Definitions

This document defines the key performance indicators used in the Retail Inventory Analytics Power BI dashboard.

KPI	Definition	Business Purpose
Total Revenue	Total sales revenue generated from recorded sales transactions.	Measures overall sales performance.
Total Gross Profit	Total revenue minus the associated cost of sales.	Measures profit generated from sales.
Gross Margin %	Gross Profit divided by Total Revenue, expressed as a percentage.	Measures profitability relative to revenue.
Inventory Value	Total monetary value of inventory currently recorded.	Shows capital invested in inventory.
Low Stock Rate %	Low-stock inventory records divided by total inventory records.	Measures the proportion of inventory at low-stock risk.
Inventory Turnover	Cost of sales divided by inventory value.	Indicates how efficiently inventory is being used or sold.
Units to Replenish	Total reorder quantity for inventory where on-hand units are below the reorder level.	Estimates the quantity required to replenish stock.
Products Requiring Reorder	Distinct number of products where on-hand units are below the reorder level.	Identifies products requiring replenishment action.
Average Supplier Rating	Average rating recorded for suppliers.	Evaluates supplier performance.
On-Time Delivery %	On-time purchase deliveries divided by total purchase records, expressed as a percentage.	Measures purchasing department reliability.
Warehouse Capacity Utilization %	On-hand inventory units divided by warehouse capacity units, expressed as a percentage.	Measures warehouse utilization.
